

Your Online Download Portal

With the **MSP Mediabox** you offer employees, customers, partners, the press, suppliers and other service providers a download platform for all the corporate media you want to share. In doing so, you ensure that the available content is always up-to-date and CI-compliant.

You can provide any content out of censhare and create and control various user roles and rights. Using the Mediabox requires neither training nor instruction. It is intuitive to use (similar to any cart system). Interested parties have the opportunity to create an account (which you can either approve or reject).

With your permission, Mediabox users are able to download their desired media in various formats and store and manage them in selections. These selections can be shared via a download link straight out of the Mediabox. Pre-defined filters and searches make it easier to find the right content and information.
